                                                                                                                                                                                                                                                                                                                                                                                             ISOFORM 2; MAY BE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED AT HIGHEST LEVELS IN TESTIS.
MODERATE LEVELS FOUND IN HEART, LUNG, LIVER AND SKELETAL MUSCLE.
WERY LOW LEVELS DETECTED IN KIDNEY, BRAIN AND SPLEEN. ALSO
EXPRESSED IN GROWING UNDIFFERENTIATED MESENCHYMAL STEM CELLS BUT
NOT DURING THE TERMINAL DIFFERENTIATION PHASE.
SIMILARITY: CONTAINS A C3HC4-CLASS ZINC FINGER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: NUCLEAR.
